

ABSTRACT OF THE DISCLOSURE

A machine-readable medium has a set of machine-readable instructions for causing a computer to perform a method. The method includes checking a layout having a layout line width for at least one line versus a schematic having a schematic line width for the at least one line. Extracting a line width property from the schematic and transferring the line width property to the layout are included in the method, as is checking a design for the at least one line versus the schematic.
